Logger Pro Dot Activity

Note: The Logger Pro Dot Guide at mrmont.com will tell you how
to import & put dots on a video.

Choose a moving object to film. It is best if the motion of
the object is perpendicular to the direction of shooting the
video (see diagram.)

CAUTION: If the object goes too fast, the video may be
blurry.

Import the video into Logger Pro and put dots on it.

Take a screenshot of the dot pattern and print it out.

Tape the screenshot into your notebook and annotate the
regions of:
   A. Speeding up.
   B. Slowing down.
   C. Constant speed.
