

## How to combine vectors

## Rowing across a river

### Does the current delay you?

2.  $V_x$  and  $V_y$ *rowing velocity = 2 m/s**current velocity = 3 m/s*

First solve for the time it takes the boat to cross 12 m to the right.

Then solve for how far down the current carries the boat

2.  $V_x$  and  $V_y$ 

rowing velocity = 2 m/s

current velocity = 3 m/s

First solve for the time it takes the boat to cross 12 m to the right.

Then solve for how far down the current carries the boat.

$$V_{xi} = 2 \text{ m/s}$$

$$a = 0$$

$$\Delta x = 12 \text{ m}$$

$$t = ?$$

$$\Delta x = V_{xi}t + \frac{1}{2}at^2$$

$$12 = (2)t + 0$$

$$6 \text{ s} = t$$

$$V_{yi} = -3 \text{ m/s}$$

$$a = 0$$

$$t = 6 \text{ s}$$

$$\Delta y = ?$$

$$\Delta y = V_{yi}t + \frac{1}{2}at^2$$

$$= (-3)(6) + 0$$

$$= -18 \text{ m}$$

rowing velocity = 3 m/s

current velocity = 4 m/s

First solve for the time it takes the boat to cross 12 m to the right.

Then solve for how far down the current carries the boat

**Try it!**

$$t = 4 \text{ s}$$

$$\Delta y = -16 \text{ m}$$

The speed of the motorboat's engine is 5 m/s. The current flows at 4 m/s. If the motorboat is pointed straight across the river...

- (a) how long will it take to cross?
- (b) How far downstream will it be carried in that time?

The speed of the motorboat's engine is 5 m/s. The current flows at 4 m/s. If the motorboat is pointed straight across the river...

(a) how long will it take to cross?

(b) How far downstream will it be carried in that time?

X

$$\Delta x = 100 \text{ m}$$

$$v_{xi} = 5 \text{ m/s}$$

$$a_x = 0$$

$$t = ?$$

$$\Delta x = v_{xi} t + \frac{1}{2} a_x t^2$$

$$100 = 5t + 0$$

$$20 \text{ s} = t$$

Y

$$\Delta y = ?$$

$$v_{yi} = -4 \text{ m/s}$$

$$a_y = 0$$

$$\Delta y = v_{yi} t + \frac{1}{2} a_y t^2$$

$$\Delta y = -4t + 0$$

$$\Delta y = -4(20)$$

$$\Delta y = -80 \text{ m}$$

The motorboat is pointed straight across the river and takes 7 seconds to cross. During that time, the motorboat is carried 63 m downstream.

- (a) What is the velocity of the current?
- (b) What velocity is provided by the motorboat's engines?

**Try it!**

See if you can get the answers:

(a)  $v_y = 9 \text{ m/s}$

(b)  $v_x = 12 \text{ m/s}$
